Bringing the Future into Focus®

AN ELECTRIC CLIENT SUCCESS STORY

Optimizing Penetration Testing and Social Engineering Assessments for a safe, monitored network.

InfoSight is a Cybersecurity provider for Pioneer Electric providing best practices and solutions to all their security needs.

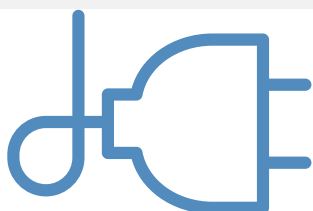

CHALLENGES

Pioneer Electric's team came to InfoSight with a wide range of security needs. They wanted to test their efficiency of their organization's overall security awareness training along with other tests on their network.

Pioneer Electric wanted to:

- Protect distribution networks from outside intrusion
- Protect members assets and data against cyberattacks
- Protect physical assets from social engineering attacks
- Test security awareness training

SOLUTIONS

Pioneer Electric is now able to see a clear picture of their security posture and works with InfoSight on updates and recommendations. This allows their employees to quickly mitigate security issues.

InfoSight:

- Performed external, internal and WIFI network vulnerability assessments and penetration tests on their operational technology
- Provided mitigation steps and measure to reduce the risk of discovered vulnerabilities in their operational technology
- Performed physical security reviews of critical sites and provided mitigation steps and measure to reduce the risk of discovered vulnerabilities
- Performed social engineering impersonation tests and clean desktop assessments against employees to test the efficiency of their security awareness policies and training

We chose InfoSight to run our security assessments because they have worked with other cooperatives like us and we heard great things about them. InfoSight's employees are very thorough, professional, could do the job within budget and get the results we were looking for. We highly recommend them!
